

ROOTS-AI™ PHASE 1 MVP — FINAL CONTROLLED REFERENCE REGISTER v1.4

Vendor Issue / Single Source of Truth

Package rule: This register, the exact files listed below and SHA256SUMS.txt constitute the complete vendor implementation package. No earlier package, duplicate, draft, G02/V01 reference, historical “FINAL/MASTER” filename, informal message or AI-generated mockup changes this baseline unless ROOTS issues a new controlled register.

Correction-sheet rule: Several controlled PDFs preserve legacy source pages for provenance. Where a v1.0.1/v3.3.2 control or correction sheet expressly supersedes legacy wording, the correction sheet controls; the legacy wording is not a competing requirement. This is intentional source provenance, not an unresolved conflict.

Visual authority: Agreement/commercial terms → controlled implementation baseline → File 14 Visual Direction → written-approved PUB-01 Golden Screen in ROOTS-owned editable Figma → approved downstream screens. File 15 controls PUB-01 content/routes/states/accessibility. File 16 SVGs are functional/content wireframes only.

Commercial baseline: Phase 1 fixed total = USD 3,600; M1–M4 = USD 900 each; payment only after written ROOTS acceptance. Golden Screen/Figma/design-system obligations are included; no additional design surcharge.

Item	Exact controlled filename	Role	SHA-256

Integrity: SHA256SUMS.txt contains 19 physical controlled deliverables corresponding to 16 numbered items; items 02, 03 and 05 include companion executable/editable source files. File 00 and SHA256SUMS.txt are integrity controls and are not self-hashed to avoid circularity.

Implementation start condition: Vendor shall checksum-verify the package before Day 0 and record the result. Any mismatch, missing file or extra purported authority must be reported before implementation.
