

ROOTS-AI™ C-03 Report Content & Visual Reference Pack v1.0.1 - CONTROLLED CORRECTION

Document ID: ROOTS-C03-REPORT-001 | Controlled correction to v1.0.0

This correction sheet is an integral part of the attached v1.0.0 human-readable release and supersedes only the clauses expressly identified below. All other approved report-content, safety, deterministic-data, privacy, accessibility and 19-section requirements remain in force.

1. Linked dataset versions

Supersedes Section 1 - Linked datasets. The report implementation shall use **C-01 v1.0.1** and **C-02 v1.0.1**. The canonical report JSON shall store the actual questionnaire_version and scoring_version used for each report. No report may claim v1.0.0 when generated from v1.0.1.

2. Visual authority and semantic colors

Supersedes Section 2 wherever fixed palette, typeface, spacing or component styling could be interpreted as final visual authority. Classification labels, thresholds, accessibility requirements, numeric/text equivalents, page-size consistency, footer metadata and non-stigmatizing imagery rules remain binding. Existing hex values, Inter/Arial references and the 8-point grid are **semantic/legacy implementation references only**, not final UI tokens. Final colors, typography treatment, spacing, chart appearance, components and visual hierarchy are governed by the approved ROOTS-AI Visual Direction and, after written ROOTS-AI approval, the PUB-01 Golden Screen/design system. Visual styling must never alter score meaning, thresholds, content, accessibility or report parity.

3. Biological State identifier

Supersedes Section 4.3 placeholder. Use **{biological_state_classification}** for the Biological State label. The domain ID **BS** remains exclusively Biological Safety Signals™. Implementations must not reuse BS as an identifier for Biological State™.

4. Driver cardinality and rendering

Supersedes Sections 4.2 and 4.6 wherever three drivers are assumed. The report shall render exactly the deterministic driver outputs returned by C-02 v1.0.1: **zero to three output entries**. A co-primary pair is one output entry containing two domain IDs. Do not duplicate a domain, invent a secondary/tertiary driver, or insert an ineligible/null/<25 domain to fill layout space. If no eligible driver exists, use the approved no-dominant-burden copy. Executive Summary wording must adapt to the number of available driver outputs.

5. Biological Triad™ fallback

Supersedes Section 4.8 fixed three-item assumption. The Biological Triad™ may render only verified deterministic inputs. Preferred inputs are available driver output(s) plus an actually present protective factor. If fewer than three eligible elements exist, use a reduced two-element/one-element state or the approved Not Available state. No AI or template may invent a missing driver or protective factor. Relationship language remains possible/potential, never causal.

6. Reference sample and version display

Supersedes Section 8 version references only. The sample remains illustrative and retains the shown numerical example unless separately revised. Any displayed questionnaire/scoring/rules version must reflect **C-01 v1.0.1 / C-02 v1.0.1** as applicable. Report-template version is **C-03 v1.0.1**. Version metadata must be taken from canonical stored report JSON, not hard-coded.

7. Acceptance check RPT-04

Supersedes RPT-04. Every chart has a text and numeric equivalent, never relies on color alone, meets accessibility requirements, and conforms to the written-approved ROOTS-AI Golden Screen/design system for final visual presentation. C-03 semantic colors do not override the approved final visual system.

8. Canonical JSON / null-state clarification

Clarifies Sections 9 and 10 without changing their intent. Drivers must be represented as the exact C-02 v1.0.1 deterministic output, including zero-length arrays and co-primary structure. Missing driver/protective-factor data must remain explicit and must trigger governed reduced/Not Available states; no imputation is permitted. Web and PDF continue to render from the same stored canonical JSON hash.

Integrity statement. This v1.0.1 correction does not change the 19-section report architecture, domain names, classification thresholds, scoring mathematics, safety boundary, fixed medical/AI disclaimer, governed narrative limits, micro-action library, laboratory-discussion boundary, web/PDF same-JSON requirement, or prohibition on diagnosis/treatment/medication advice.

Precedence. If the attached v1.0.0 pages conflict with this correction on the matters above, this v1.0.1 correction controls.

ROOTS-AI™ C-03

Report Content & Visual Reference Pack — Version 1.0.0

Document ID: ROOTS-C03-REPORT-001

Status: APPROVED EXECUTABLE CONTENT RELEASE

Effective date: 21 July 2026

This pack fixes the content contract, layout system, fallback language and reference rendering for all 19 report sections. It does not authorize diagnosis, prognosis, treatment or medication advice.

1. Release Control and Use

Field	Binding value
Owner	ROOTS AI HEALTH SYSTEMS, Inc.
Version	1.0.0
Linked datasets	C-01 v1.0.0 and C-02 v1.0.0
Language	English
Report title	ROOTS Biological Intelligence Report™
Product boundary	Educational wellness assessment; non-diagnostic
Canonical data source	Immutable report JSON created after deterministic scoring
Required formats	Authorized interactive web report and pixel-consistent PDF
Minimum sections	Exactly 19; unavailable sections display the approved Not Available state

2. Visual System

Token	Value	Use
Primary Navy	#1A2A4A	Cover, headings, principal score accents
Soft Navy	#2A4060	Secondary cards and diagrams
Warm White	#FAFAF8	Page background
Charcoal	#1A1A1A	Body copy
Optimized	#27AE60	Domain 0-24
Compensating	#F39C12	Domain 25-49
Strained	#E67E22	Domain 50-74
Dysregulated	#C0392B	Domain 75-100
Muted	#6B7280	Metadata and disclaimers
Typeface	Inter; Arial fallback	Web and PDF
Grid	8-point spacing system	All components
Page	A4 or Letter selected once per deployment	No mixed page sizes

- Minimum 16 px body text on web and 10 pt in PDF.
- All charts require a text label and numeric value; color alone never conveys state.
- No stock imagery implying diagnosis, shame, fear or guaranteed transformation.
- Charts and copy use the same canonical report JSON.
- PDF footer includes report ID, generated timestamp, version and “Educational — Not a Diagnosis”.

3. Score Labels and Domain Definitions

ID	Approved label	Approved meaning
MR	Metabolic Resistance™	Self-reported resistance to expected weight change and activity-related metabolic context.
HS	Hunger & Satiety Signals™	Hunger, craving, fullness and post-meal response patterns.
SR	Sleep Recovery Index™	Sleep duration, continuity and perceived restoration.

ID	Approved label	Approved meaning
CH	Circadian Health Score™	Alignment of light, screen, meal and sleep timing.
SL	Stress Load™	Perceived tension, cognitive activation and stress-linked eating.
IB	Inflammation Burden Index™	Non-specific symptom burden; not a laboratory or clinical inflammation measure.
BS	Biological Safety Signals™	Perceived energy, appetite drive and resistance signals.

Range	Label	Participant-facing explanation
0-24	Optimized	Few burden signals were reported in this area.
25-49	Compensating	Some signals are present, while current routines may still be helping your system compensate.
50-74	Strained	Several signals may be placing consistent pressure on this area.
75-100	Dysregulated	A high burden of signals was reported. This is not a diagnosis; consider discussing persistent or concerning symptoms with a qualified professional.

4. Nineteen-Section Content Contract

1. Cover Page

Element	Approved content
Source	Template
Required/fallback copy	ROOTS Biological Intelligence Report™
Rendering and governance	Display ROOTS-AI™ wordmark, participant display name or Participant, report ID, generation date, report version and “Educational — Not a Diagnosis”.

2. Executive Summary

Element	Approved content
Source	Governed narrative + deterministic fallback
Required/fallback copy	Your current pattern reflects a combination of reported biological signals. The strongest areas in this assessment are {primary_driver}, {secondary_driver} and {tertiary_driver}. These results are educational and describe your answers; they do not diagnose a condition.
Rendering and governance	Two short paragraphs, 90-160 words. Mention Biological State, main drivers, one strength and confidence limitation.

3. ROOTS Biological State™

Element	Approved content
Source	Deterministic
Required/fallback copy	Your ROOTS Biological State™ is {biological_state}/100 — {domain_classification}.
Rendering and governance	Show score, label and: “This summarizes the available seven-domain questionnaire pattern; it is not a medical risk probability.”

4. ROOTS Opportunity Score™

Element	Approved content
Source	Deterministic
Required/fallback copy	Your ROOTS Opportunity Score™ is {opportunity_score}/100.
Rendering and governance	Add: “This proprietary educational indicator reflects the amount of modifiable capacity suggested by the current questionnaire pattern. It is not a forecast or clinical outcome probability.”

5. ROOTS Confidence™

Element	Approved content
Source	Deterministic
Required/fallback copy	Confidence in this interpretation is {confidence_label} ({confidence_score}/100).
Rendering and governance	List overall coverage, answer confidence and consistency. Never conceal missing/null domains.

6. Key Drivers

Element	Approved content
Source	Deterministic ranking + governed explanation
Required/fallback copy	Primary: {primary_driver}. Secondary: {secondary_driver}. Tertiary: {tertiary_driver}.
Rendering and governance	If co-primary, label both. If no domain ≥25, show: “No dominant burden signal was identified in the available answers.”

7. Seven-Domain Score Breakdown

Element	Approved content
Source	Deterministic
Required/fallback copy	{domain_label}: {domain_score}/100 — {domain_classification}.
Rendering and governance	Seven horizontal bars in fixed order MR, HS, SR, CH, SL, IB, BS. A null score displays “Not enough information”.

8. Biological Triad™

Element	Approved content
Source	Template + rules
Required/fallback copy	Your current triad connects {primary_driver}, {secondary_driver} and {top_protective_factor}.
Rendering and governance	Three labelled circles. Diagram describes relationships as possible, not causal.

9. Future Projection

Element	Approved content
Source	Rules + governed narrative
Required/fallback copy	If the current pattern continues, the same signals may remain influential. Small consistent changes may alter the pattern over time.

Element	Approved content
Rendering and governance	Never predict disease, lifespan, deterioration or guaranteed improvement. Use 3-4 conditional bullets.

10. 90-Day Roadmap

Element	Approved content
Source	Rules library
Required/fallback copy	Month 1 — Stabilize signals. Month 2 — Build flexibility. Month 3 — Reinforce recovery.
Rendering and governance	Select only eligible micro-actions. No more than three actions per month.

11. Nutrition Priorities

Element	Approved content
Source	Rules library
Required/fallback copy	Focus on meal structure, adequate protein and fibre, hydration, and timing patterns that match your circumstances.
Rendering and governance	No calorie prescription, supplement dosage, therapeutic diet or disease claim.

12. Action Priorities

Element	Approved content
Source	Rules library + governed explanation
Required/fallback copy	Start with the smallest action you can repeat consistently.
Rendering and governance	Rank 3-5 micro-actions; each includes action, reason, frequency and safety note where applicable.

13. What Is Going Well

Element	Approved content
Source	Deterministic protective factors
Required/fallback copy	Your answers also show strengths that may support change.
Rendering and governance	Display only protective factors actually present. If none: "No protective factor was confirmed from the available answers; this may reflect missing data rather than absence."

14. Specific Concerns

Element	Approved content
Source	Rules + governed explanation
Required/fallback copy	Some reported signals may deserve additional attention, especially if they are persistent, worsening or affecting daily function.
Rendering and governance	Reference question IDs internally; do not display alarming medical labels.

15. Suggested Laboratory Discussion

Element	Approved content
Source	Approved eligibility rules
Required/fallback copy	You may wish to discuss whether any tests are appropriate with a qualified healthcare professional.
Rendering and governance	Tests are optional discussion prompts only; never order, require or interpret a test.

16. Participant Answers

Element	Approved content
Source	Canonical response snapshot
Required/fallback copy	Your answers are shown exactly as submitted.
Rendering and governance	Organize by 13 modules. Show display label, N/A, units and questionnaire version; omit hidden technical values.

17. Biological Card

Element	Approved content
Source	Deterministic
Required/fallback copy	Biological State {biological_state}; Opportunity {opportunity_score}; Recovery Potential {recovery_potential}; Confidence {confidence_label}.
Rendering and governance	Compact summary with driver list and all content/rules versions.

18. Final Word

Element	Approved content
Source	Governed narrative + fallback
Required/fallback copy	Your answers are a starting point, not a verdict. Choose one realistic action, observe how you respond, and seek professional support when symptoms are persistent or concerning.
Rendering and governance	50-100 words; may acknowledge Q73 without quoting sensitive free text verbatim.

19. Medical and AI Disclaimer

Element	Approved content
Source	Fixed template
Required/fallback copy	ROOTS-AI™ provides educational wellness information based on self-reported answers. It is not a medical device, diagnostic service, clinical assessment, prognosis or substitute for a qualified healthcare professional. It does not provide medical treatment or medication instructions. Scores are proprietary questionnaire indicators and are not validated probabilities of disease or future outcomes. AI may assist with wording, but all scores and classifications are calculated by deterministic rules. If you have severe, sudden or worsening symptoms, or believe you may be in immediate danger, contact local emergency services or a qualified healthcare professional.
Rendering and governance	Display in full in web and PDF; no truncation.

5. Approved Micro-Action Library

Domain	Approved action	Rationale	Safety qualifier
MR	Schedule three 10-minute walks after meals this week.	Supports routine movement without promising weight loss.	If exercise is unsafe or painful, obtain professional guidance.
HS	Include a protein source and fibre-rich food in one regular meal daily.	May support meal satisfaction.	Adapt for allergies, kidney disease or clinician-directed diets.
SR	Keep wake time within a one-hour window for seven days.	Supports a consistent recovery schedule.	Persistent snoring/gasping warrants professional assessment.
CH	Seek 10-20 minutes of outdoor morning light when safe.	Supports time-of-day cues.	Avoid direct sun exposure beyond safe local guidance.
SL	Use a two-minute slow-breathing or pause routine once daily.	Creates a repeatable recovery cue.	Not a substitute for mental-health care.
IB	Track one recurring symptom, meal context and timing for seven days.	May help identify patterns for discussion.	Do not use the log to self-diagnose food intolerance.
BS	Choose one action small enough to repeat for two weeks.	Builds consistency while respecting perceived resistance.	Seek care for persistent, severe or unexplained symptoms.

6. Laboratory Discussion Library

Eligibility signal	Optional clinician discussion	Mandatory wording
Self-reported metabolic concern or Q13 metabolic context	Whether glucose regulation testing, such as fasting glucose or HbA1c, is appropriate	Only a clinician can decide whether testing is appropriate and interpret the result.
Persistent fatigue, weight change or thyroid context	Whether thyroid evaluation is appropriate	Questionnaire answers cannot determine thyroid function.
Cardiometabolic context	Whether a lipid profile and blood-pressure review are appropriate	No test is required by ROOTS-AI™.
Persistent non-specific symptoms	Whether targeted clinical evaluation is appropriate before broad testing	Do not recommend hs-CRP or other tests automatically.
Snoring/gasping signal	Whether sleep assessment is appropriate	Do not label sleep apnoea from the questionnaire.

7. Governed Narrative Contract

- Input is an allow-listed explanation object containing pre-calculated values, classifications, driver IDs, eligible content IDs and version identifiers.
- Q73 free text is sanitized, separately classified and never inserted into system instructions. It may be summarized only when safe and relevant.
- Output is JSON matching the approved section schema; every section has a length limit and deterministic fallback.
- Required framing includes may, suggests, appears consistent with, possible or potential where causality is uncertain.
- Prohibited: “you have”, “this proves”, diagnosis, cure, treatment, medication change, guaranteed outcome, invented test result, invented fact or emergency triage beyond fixed approved text.
- One governed retry is permitted after validation failure; then the fixed fallback copy is used.

8. Reference Sample — All 19 Sections

#	Section	Reference sample content
1	Cover	Sample Participant • Report RPT-SAMPLE-001 • 21 July 2026 • v1.0.0 • Educational — Not a Diagnosis

#	Section	Reference sample content
2	Executive Summary	Your answers suggest a multi-factor pattern led by Stress Load, Sleep Recovery and Metabolic Resistance. Current strengths include readiness for one small change and a supportive environment. Confidence is High because the assessment was complete and internally consistent.
3	Biological State	61/100 — Strained. This is a questionnaire summary, not a medical risk probability.
4	Opportunity Score	69.5/100 — a proprietary indicator of modifiable capacity suggested by the current pattern.
5	Confidence	84/100 — High; complete answers, high self-confidence and consistent domain responses.
6	Drivers	Stress Load 75; Sleep Recovery 68; Metabolic Resistance 62.
7	Domains	MR 62; HS 48; SR 68; CH 55; SL 75; IB 58; BS 61.
8	Biological Triad	Stress Load + Sleep Recovery + consistent meal timing as the top protective factor.
9	Future Projection	If unchanged, stress and sleep signals may continue to influence energy and eating patterns; this is not a prognosis.
10	90-Day Roadmap	Month 1: consistent wake time. Month 2: three post-meal walks weekly. Month 3: reinforce the most sustainable routine.
11	Nutrition Priorities	Use regular meals; include protein and fibre in one main meal; keep hydration consistent.
12	Action Priorities	1) fixed wake-time window; 2) ten-minute walks; 3) two-minute daily pause; 4) plan one balanced meal.
13	What Is Going Well	High readiness, supportive home environment and some regular meal timing.
14	Specific Concerns	Persistent fatigue, sleep disruption or unusual thirst should be discussed with a qualified professional.
15	Laboratory Discussion	Ask whether glucose regulation, thyroid or other evaluation is appropriate for your history; ROOTS-AI™ does not order or interpret tests.
16	Participant Answers	Display the immutable 13-module response snapshot.
17	Biological Card	State 61 • Opportunity 69.5 • Recovery 63.0 • Confidence High • Rules v1.0.0.
18	Final Word	Your answers are a starting point, not a verdict. Begin with one realistic action and observe what changes.
19	Disclaimer	Display the full fixed disclaimer from Section 4.19.

9. Canonical Report JSON Contract

Required top-level keys: report_id, participant_display, generated_at, questionnaire_version, scoring_version, report_template_version, narrative_template_version, domain_scores, biological_state, opportunity_score, recovery_potential, confidence, drivers, protective_factors, limitations, sections[1..19], disclaimer_version and audit_trace_reference.

- No field may contain NaN, Infinity or an undeclared enum.
- Null domain values require an explicit limitation object and approved Not Available copy.
- Section order is fixed 1-19.
- Web and PDF must render from the same stored JSON hash.

10. Acceptance Checks

ID	Pass condition
RPT-01	All 19 sections exist in web and PDF, and scores, drivers and versions match canonical JSON exactly.
RPT-02	Null and missing states display approved copy and never use imputation.
RPT-03	No prohibited diagnostic or prescriptive claim appears.
RPT-04	Every chart has a text equivalent and meets the approved visual tokens.
RPT-05	PDF passes minimum/maximum-content visual regression with correct page breaks.
RPT-06	Report access is private, authorized and audited.
RPT-07	Narrative failure uses deterministic fallback; footer metadata and the full disclaimer are present.
