

ROOTS-AI™ C-08 Editable UI/UX & Brand Asset Handoff

v1.0.1 — CONTROLLED CORRECTION

Document ID: ROOTS-C08-DESIGN-001 | Controlled correction to v1.0.0

This correction is integral to the attached v1.0.0 release. It preserves the 48 named screen/state families, the 192-frame coverage inventory and the four controlled widths, while correcting the authority, ownership and acceptance meaning of the editable design handoff. Where this sheet conflicts with the attached v1.0.0 pages on the matters below, v1.0.1 controls.

1. Section 1 — what the 192 SVG frames are

The handoff retains **48 named screen/state families × four controlled widths (360, 768, 1024 and 1440 px) = 192 SVG frames**. Those SVGs are **FUNCTIONAL AND CONTENT WIREFRAMES — NOT FINAL VISUAL DESIGN**. Their importability into Figma does not make them the final editable design source and does not constitute final visual approval. **design_tokens.json** and **screen_catalog.json** remain useful machine-readable implementation/coverage inputs, but any legacy aesthetic token values are not final visual tokens unless incorporated into the written-approved Golden Screen/design system.

2. Section 2 — authority

C-05 v1.0.1 controls screen inventory, behavior, roles, navigation, responsive requirements, component/state behavior and acceptance evidence. C-03 v1.0.1 controls report content/data behavior and C-04 v1.0.1 controls website/legal/consent/system copy. Existing SVGs control approved content, required elements, screen/state identity, structure/flow and functional intent where applicable; **they do not control final aesthetics, final composition, visual hierarchy, typography, spacing, color, component appearance or art direction**. Final visual authority is: **ROOTS-AI Visual Direction → written-approved PUB-01 Golden Screen in editable Figma → approved downstream design system/screens**. Functional/content authority and visual authority apply together; neither may alter the other's controlled requirements.

3. Section 3 — inventory integrity

The existing IDs and coverage inventory remain binding: **12 PUB + 5 LEG + 11 ASM + 5 RPT + 10 ADM + 5 SYS = 48 screen/state families**, each evidenced at 360/768/1024/1440. The correction changes the **authority** of the legacy SVGs, not the required coverage, routes/states or screen IDs.

4. Section 4 — brand and asset controls

The phrase **“approved Quiet Luxury token system”** is **superseded**. Quiet Luxury/legacy palette, type, spacing and token values are historical/reference inputs only unless selected into the written-approved Golden Screen. The final brand/UI system is established through the approved Golden Screen and resulting component/token library. A later ROOTS-approved master logo may require proportionate header, spacing, responsive or component adjustments; no legacy layout dimension may block correct implementation of the approved master brand, provided controlled functionality and accessibility are preserved.

5. Mandatory editable Figma handoff and ROOTS ownership

The final visual handoff shall include the **editable PUB-01 Golden Screen and resulting approved design system in a ROOTS-owned Figma workspace/file**, including reusable components, variants/states, final tokens/styles, responsive rules/notes, icons/illustrations and other editable source assets needed to reproduce the approved UI. ROOTS shall hold owner/admin control or receive complete transferable ownership as applicable. The handoff must not depend on the Implementation Partner retaining a private account, library, plugin, paid seat, inaccessible font/source file or other proprietary dependency. No remaining screen may be visually finalized in bulk before written ROOTS-AI approval of PUB-01.

6. Asset provenance and licensing

A final **asset manifest** is required for production visual assets. For each logo, icon, illustration, photograph, generated image, font or third-party visual asset, record source/provenance, owner or licensor, applicable license/usage status, editable-source availability and production approval status. A previously supplied, generated or reference image is **not automatically an approved production asset**. Unresolved or non-transferable licensing/dependency issues must be identified before acceptance.

7. Section 5 — acceptance and visual regression

The Implementation Partner must preserve every required screen ID and demonstrate the corresponding implemented screen/state at all four controlled breakpoints. Keyboard/focus, contrast, touch-target, screen-reader and responsive checks remain required by C-05 v1.0.1. **Visual regression for final aesthetics shall compare implementation against the written-approved Golden Screen-derived design system and approved downstream Figma screens, not pixel-for-pixel against the legacy SVG wireframes**. The SVG inventory remains a coverage/content/function check.

8. Final handoff acceptance evidence

Acceptance evidence shall include, as applicable: ROOTS-owned editable Figma source; component/token library; responsive states at 360/768/1024/1440; editable brand/source assets; asset manifest/licenses; screen-ID mapping; exported production assets; visual-regression baseline/results; accessibility evidence; and confirmation that no required production source is locked solely in a partner-controlled account. Mere SVG importability is not sufficient final design handoff evidence.

9. No scope or commercial expansion

This correction does not change the fixed **48-family / 192-frame** coverage inventory, controlled widths, approved functional routes/states, accessibility obligations, fixed commercial fee, 30-calendar-day schedule or 7-day UAT. It prevents functional wireframes and legacy design tokens from being mistaken for the final approved visual system and makes the editable-design ownership/handoff requirement explicit.

ROOTS-AI™ Phase 1 MVP

C-08 Editable UI/UX & Brand Asset Handoff

Document ID	ROOTS-C08-DESIGN-001
Version	1.0.0
Issue date	23 July 2026
Owner	ROOTS AI HEALTH SYSTEMS, Inc.
Status	APPROVED EDITABLE DESIGN HANDOFF
Commercial baseline	RM 15,000 fixed fee • 30 calendar days • 7-day UAT

This controlled annex completes the approved ROOTS-AI Phase 1 baseline. It does not replace C-01 through C-05; it makes their implementation inputs directly importable and testable.

1. What is delivered

The handoff contains 48 named screens/state families at four controlled widths (360, 768, 1024 and 1440 px), producing 192 editable SVG frames. Figma imports SVG as editable vector layers. design_tokens.json and screen_catalog.json provide machine-readable tokens, routes and ownership.

2. Authority

C-05 controls behavior, roles, navigation, responsive rules and component states. C-03 controls report content. C-04 controls exact website, legal, consent and system copy. The SVG frames define composition and visual hierarchy and do not authorize text changes.

3. Screen inventory

4. Brand and asset controls

The package includes the approved Quiet Luxury token system, an editable reference wordmark SVG, visual source images previously supplied/generated, asset usage notes and the existing landing-page HTML reference. If ROOTS later supplies a separately registered master logo, that master replaces only the reference wordmark artwork; layout dimensions and accessibility requirements remain.

5. Acceptance

The implementation partner must preserve every screen ID and demonstrate the corresponding implemented screen/state at the four breakpoints. Automated visual regression, keyboard/focus checks, contrast, touch target and screen-reader smoke tests remain required by C-05.
