Runtime	Node v20.20.2
Comparison rule	Exact deep equality of the eight canonical output fields (domains, coverage, biological_state, opportunity, recovery_potential, protective_count, confidence, drivers); no tolerance. Inputs are the normalized burden points from the workbook; null = N/A or missing.
Classification band rule	Bands are inclusive whole-number ranges (Classifications sheet). A one-decimal Recovery Potential takes the highest band whose minimum it has reached (e.g. 74.5 → Moderate, 75.0 → High). Integer scores are unaffected.
Reproduce	npm ci → npm run evidence:golden (this report) · npm run test:scoring (the same cases as automated tests)
